1. Find the language represented by the finite automata given below and give an informal description. 5 sample strings that will be accepted by the automata

informal description

The strings that will be accepted by finite automata should start and end with same symbol

Language represented:

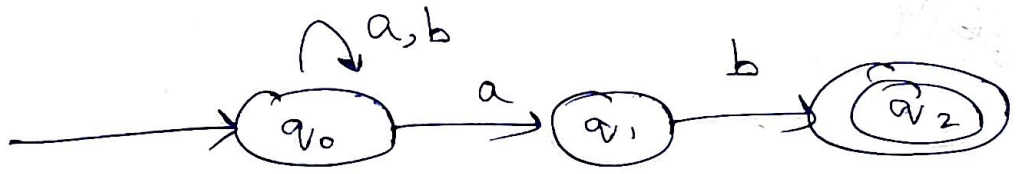

$(a+b)^*a(a+b)^*a(a+b)^*$

$+ (a+b)^*b(a+b)^*b(a+b)^*$

5 Sample strings

1. a a
2. b b
3. a b a
4. b a b
5. a b b a

2. Find the language represented by the finite automata given below and give a informal description. write 10 sample strings that will be accepted by the automata

Language regular expression

$$(a+b)^*ab$$

Informal description

The automaton accepts all strings over the alphabet that ends with a b

Sample strings

1. ab
2. aab
3. bab
4. aaab
5. abab
6. bbab
7. baab
8. babab
9. aabab
10. bbbab
